Royal University of Bhutan

Samtse College of Education

APPENDIX I

REFLECTION REPORT TEMPLATE

(For Student-teacher's Use)

Student Name: Dorji Khadu

Name of the collaborating school: Doteng Lower Secondary School

Assignment number & topic: 1/ PowerPoint Presentation

Introduction

- *Provide a quick preview of the assignment.*

  This assignment is a comprehensive reflection on my first formal lesson observation conducted in an 8th grade ICT class focused on Microsoft PowerPoint Presentation. The primary objective was to observe and document the pedagogical strategies, classroom management techniques, and student engagement methods employed by my mentor teacher, Madam Kinley Gyem. The observation focused on how theoretical concepts are translated into practical skills within a laboratory setting in ICT, specifically looking at how modern digital tools like online quizzes are integrated into a traditional lesson flow.

- *Provide a quick preview of how the experience benefited you.*

  This experience has been immensely beneficial as it provided a real-world blueprint for managing a high energy ICT laboratory environment. It helped me understand the

importance of psychological readiness of the students through mindfulness exercises and the effectiveness of using diagnostic tools to bridge the gap between previous and current grade levels. Observing a seasoned educator manage diverse learning speeds through peer mentorship has reshaped my understanding of inclusive classroom dynamics. For instance, my mentor kept everything very organize in the class by not allowing students to touch anything until and unless teachers instruction.

Body

- *Paragraph 1: Description of the assignment.*

  The assignment involved a structured observation of a 40-minute ICT lesson where the mentor teacher introduced the core functions of PowerPoint software. The lesson was meticulously planned, beginning with a concentration building breathing exercise followed by a digital diagnostic quiz to assess prerequisite knowledge from earlier grades. The core of the lesson was delivered through a demonstration model, where the teacher used organized presentations and videos to explain slide design before allowing students to apply these concepts on their individual workstations. The session concluded with a formative assessment through direct observation of student work and a concluding question and answering to reinforce the day's learning.

- *Paragraph 2: Description of the impact of the task on you.*

  The impact of this observation on my professional development has been profound, particularly in seeing how dynamic delivery and high energy levels can command a room full of technology distracted students. It highlighted that a teacher’s presence being very loud and energetic is not just about volume, but about maintaining a rhythm that keeps students engaged with the task at hand. Furthermore, seeing the mentor manage the ICT lab’s technical readiness beforehand taught me that effective teaching starts long before the students enter the room. This has increased my confidence in using digital platforms for assessment and reaffirmed my commitment to creating an inclusive environment where every student is given an equal opportunity to participate.

- *Paragraph 3: Description of the lesson learnt from the assignment.*

  The most significant lesson I learned is the power of peer teaching as a management strategy. By allowing advanced students to support those who are progressing as slow learners, the teacher successfully addressed the diverse needs of the class without leaving any student behind. Additionally, I learned that integrating mindfulness, such as breathing exercises, serves as a vital transition tool that prepares the adolescent brain for the technical rigors of ICT. I also learned the value of providing constructive, supportive feedback that prompts critical thinking through follow up questions, rather than just giving simple correct or incorrect responses.

Conclusion

- *Summary of the experiences.*

  The observation of madam Kinley Gyem's lesson was a inspering in blending technical instruction with empathetic classroom management. From the initial diagnostic quiz to the final structured review, every phase of the lesson was designed to build student confidence and competence in using PowerPoint. The use of diverse teaching materials, including computers, whiteboards, and digital platforms, ensured that multiple learning styles were catered to throughout the session.

- *Overall impact/lessons learnt.*

  Interestingly my first experience taught me that being an effective ICT teacher requires a balance of technical expertise, meticulous preparation, and a vibrant, inclusive personality. I have learned that a conducive learning environment is built on clear rules, functional equipment, and the psychological readiness of the students. I am now eager to incorporate these strategies specifically the breathing exercises, peer tutoring

models, and energetic delivery into my own future teaching practice to ensure a high level of student engagement and success.
