APPENDIX I

REFLECTION REPORT TEMPLATE

(For Student-teacher's Use)

Student Name: Dorji Khadu

Name of the collaborating school: Doteng Lower Secondary School

Assignment number & topic:3/ Multimedia

Introduction

- *Provide a quick preview of the assignment.*

  This reflection report provides an analysis of a 40-minute ICT lesson on the topic of "Multimedia," observed in Class 8 'A'. The observation was designed to examine how a mentor teacher, Madam Kinley Gyem, introduces complex digital concepts through differentiated instruction and the integration of various interactive tools. It focuses on the pedagogical transition from reviewing prior PowerPoint knowledge to exploring broader multimedia aspects, utilizing tools like Google Classroom for a structured learning flow.

- *Provide a quick preview of how the experience benefited you.*

  This experience was highly beneficial as it demonstrated the practical application of differentiated instruction and the importance of setting clear, measurable expectations at the beginning of a lesson. Observing how a safe and supportive environment can be cultivated where even incorrect student responses are validated and has provided me

with a model for fostering student confidence in technical subjects. Furthermore, the session highlighted effective strategies for managing lab resources while maintaining a high level of student participation through active monitoring.

Body

- *Paragraph 1: Description of the assignment.*

  The assignment involved observing a lesson that moved from theoretical understanding to digital application within an ICT laboratory. The mentor teacher began by reviewing the students' prior knowledge of PowerPoint and then set a clear objective: that students would be able to explain at least three key aspects of multimedia by the end of the session. The lesson structure followed a collaborative model, where students were given specific instructions for a quiz, accessed materials via Google Classroom, and then worked in groups to solve problems and share their findings with the class. Assessment was ongoing, with the teacher observing body language, interactions, and class participation to gauge real time understanding.

- *Paragraph 2: Description of the impact of the task on you.*

  The impact of this task on my professional growth has been significant, particularly in understanding the teacher's role as a facilitator who actively listens and validates student input. I was impressed by the mentor's ability to maintain a positive learning environment by setting expectations early on and using formative assessments like question-and-answer sessions to address doubts immediately. Seeing all students concentrated and participating reinforced my belief that clear communication of goals and interactive digital tools can significantly reduce off task behaviour in a lab setting.

- *Paragraph 3: Description of the lesson learnt from the assignment.*

  The primary lesson I learned from this assignment is the value of integrating theoretical concepts with practical application to make learning more tangible for

students. I learned that a successful ICT lesson requires more than just technical knowledge; it requires active attention to student interactions and a willingness to provide a safe space for learning from mistakes. Additionally, I learned the importance of technical readiness for ensuring proper use of lab resources and having digital materials pre-organized in platforms like Google Classroom to maximize instructional time.

Conclusion

- *Summary of the experiences.*

  The observation of my mentor madam Kinley Gyem's Multimedia lesson provided a comprehensive look at an effective, student-cantered ICT classroom. From the initial review of prior knowledge to the final structured Q&A session, the lesson was a cohesive blend of group discussion, digital tool use, and continuous formative assessment. The mentor successfully managed the class by creating a supportive atmosphere where students felt comfortable sharing their ideas and solving problems collaboratively.

- *Overall impact/lessons learnt.*

  Ultimately, the most lasting impact of this experience is the realization that setting clear expectations and ensuring the proper use of resources are fundamental to a productive ICT environment. I have learned that by providing students with a clear roadmap of the lesson and validating their contributions, a teacher can foster a high level of engagement and critical thinking. I plan to incorporate these strategies specifically the use of Google Classroom for structured digital activities and the validation of student responses into my future teaching to ensure a supportive and effective learning experience for all students.
