Royal University of Bhutan

Samtse College of Education

APPENDIX I

REFLECTION REPORT TEMPLATE

(For Student-teacher's Use)

Student Name: Dorji Khadu

Name of the collaborating school: Doteng Lower Secondary School

Assignment number & topic:2/ computer Software

Introduction

- *Provide a quick preview of the assignment.*

  The purpose of this assignment was to conduct a comprehensive lesson observation on topic software. This observation was designed to help me understand how theoretical ICT concepts are translated into practical, engaging classroom activities for students. The experience was immensely beneficial as it allowed me to witness the integration of technology and collaborative pedagogy in a real world setting to foster students learning. By documenting these pedagogical choices, I have gained a clearer roadmap for how to structure my own future lessons to maximize student engagement and conceptual clarity.

- *Provide a quick preview of how the experience benefited you.*

This observation provided insight into effective classroom management, the integration of student activities like peer teaching, and the importance of preparing students mentally through mindfulness.

Body

- *Paragraph 1: Description of the assignment.*

  The observation focused on a lesson titled "Software," where the teacher employed a blended teaching approach consisting of lectures, live demonstrations, and the use of multimedia such as videos and colourful slideshows. The lesson began with a unique preparatory phase involving breathing exercises and a "recollection" activity and using sticky notes, where students spent two minutes summarizing their prior knowledge from lower classes. Throughout the session, the mentor utilized various materials including computers, a whiteboard, and digital presentations to explain how computer applications function. A significant portion of the assignment involved tracking how the mentor managed learning activities, specifically his use of small group discussions and a peer teaching model where more advanced students assisted those who were struggling with the content.

- *Paragraph 2: Description of the impact of the task on you.*

  This task had a profound impact on my understanding of classroom environment and professional preparation. Seeing the teacher arrive early to ensure all systems in the ICT lab were functional and to outline lab rules showed me that technical readiness is just as important as the lesson content itself. I was particularly struck by the mentor's interpersonal style that he maintained a very loud, energetic, and encouraging presence that seemed to keep the students focused and motivated.

- *Paragraph 3: Description of the lesson learnt from the assignment.*

The most vital lesson I learned from this assignment is the importance of child education, even in a technical subject like ICT. By incorporating a breathing exercise at the start, the mentor proved that taking a moment for mental concentration can drastically improve student concentration. Furthermore, I learned the value of formative assessment, as the teacher did not rely solely on a final test but instead used constant observation and participation tracking to gauge student understanding in real-time. I also learned that providing equal opportunities for every student to volunteer and answer questions is crucial for building a supportive and inclusive classroom culture where no student feels overlooked.

Conclusion

- *Summary of the experiences.*

  The observation was highly informative, showcasing a balanced approach between direct instruction and collaborative learning. The mentor demonstrated how to successfully conclude a lesson by reviewing content and bridging it to future topics.

- *Overall impact/lessons learnt.*

  The experience reinforced my commitment to providing equal opportunities for all students to participate. I plan to incorporate mindfulness transitions and energetic delivery into my own teaching practice to enhance student engagement. Moving forward, I am determined to incorporate high-energy delivery, mindfulness transitions, and structured peer-to-peer support into my own teaching practice to ensure a conducive and equitable learning environment for all my students
